

PRAVEEN MANGALAGIRI

Newark, CA | 248-227-8636 | mangalagiripraveen7@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Technical Program / Design Release Engineer with 9 years of automotive product development experience leading vehicle systems from concept and requirements through engineering release, validation, prototype builds, production launch and issue closure. Experienced in Body Structures, BIW, Chassis, Autonomous/ADAS integration, and Vehicle Packaging. Proven ability to coordinate Design, CAE, Manufacturing, Quality, Purchasing, suppliers and vehicle integration teams while managing technical risks, engineering changes, program timing, DFM/DFA, cost/weight targets and launch readiness.

CORE COMPETENCIES

Technical Program Management | Design & Release | Cross-Functional Leadership | Requirements & Interface Management | Engineering Change / PLM | Program Timing & Milestones | Risk & Issue Management | Supplier / DFM Coordination | Prototype & Production Launch | DVP&R / Validation | Root Cause & Corrective Action | Cost & Weight Optimization | GD&T / Tolerance Stack-up | BIW / Body Structures | CATIA V5/V6 / 3DEXPERIENCE / NX | Teamcenter / ENOVIA | HyperWorks | Atlassian

PROFESSIONAL EXPERIENCE

GOKEN AMERICA | Client: LUCID MOTORS

DESIGN ENGINEER - BODY STRUCTURES / L4 AUTONOMOUS INTEGRATION | 06/2025 – 06/2026 | Newark, CA

- Own technical integration of the roof/body structure system for a Lucid SUV L4 autonomous vehicle program, driving development from subsystem requirements and architecture through design maturity and vehicle integration.
- Lead cross functional coordination across ADAS, Body, Trim, Harness, Lighting, Cleaning/Clearing and Manufacturing teams to define interfaces, resolve dependencies and support program milestones.
- Drive packaging, clash/interference, serviceability, DFA and structural integration issues to closure while balancing vehicle level requirements, timing and manufacturability.
- Coordinate CAD/design maturity and technical deliverables for body structures used to mount autonomous system subsystems to the vehicle.
- Coordinate with suppliers and lead DFM reviews to identify manufacturability risks, develop countermeasures and close issues prior to build/tooling execution.
- Communicate technical risks, open issues, dependencies and resolution paths through design reviews and cross functional program discussions.

GOKEN AMERICA | Client: NISSAN TECHNICAL CENTER NORTH AMERICA

SR. DESIGN RELEASE ENGINEER - BODY DESIGN | 03/2023 - 06/2025 | Farmington Hills, MI

- Led underbody structural system development for Nissan Pathfinder and Infiniti QX60/QX65 programs from design through engineering release, prototype validation and production readiness.
- Owned rear floor assembly release activities in PLM, including 3D CAD/2D drawing maturity, revision history, engineering approvals, GD&T and tolerance requirements.
- Coordinated cross functional design, manufacturing and build activities, supported prototype launches, drove build issues to closure and improved readiness for SOP.
- Owned BIW sealing solutions including plugs, patches, NVH mastic pads and acoustic baffles to address water ingress and noise transmission requirements for DVP testing.
- Supported windshield system design/release and launch issue resolution. Developed multiple technical countermeasures for a windshield malfunction, presented alternatives for management decision making and helped prevent a launch delay.
- Balanced technical performance, manufacturing feasibility, release timing and program risk while coordinating engineering changes and issue resolution across vehicle development stakeholders.

GOKEN AMERICA | Client: RIVIAN

RESIDENT DESIGN RELEASE ENGINEER - VEHICLE LAUNCH | 02/2022 - 03/2023

- Owned resident engineering support for skateboard structure prototype and production launch, coordinating rapid resolution of design, manufacturing and quality issues affecting vehicle builds.
- Coordinated Body Shop, Paint, General Assembly, Process Engineering, Quality, SQE, NPI and Manufacturing Engineering teams to maintain launch progress and resolve cross functional build blockers.
- Managed build stopper and issue trackers through Atlassian systems, prioritized corrective actions and drove permanent root cause solutions while protecting program timing.
- Developed production line rework strategies for nonconforming parts to minimize downtime while permanent design/process corrective actions were implemented.

CANOO

STUDIO ENGINEER - OCCUPANT PACKAGE & ERGONOMICS | 04/2021 - 02/2022 | Torrance, CA

- Coordinated Studio, Design and Engineering stakeholders from concept stage to develop occupant package and ergonomics targets supporting cabin comfort, interior space, vision and vehicle marketability.
- Provided technical feasibility guidance for interior/exterior concepts during virtual vehicle releases and managed package interfaces using RAMSIS, CAVA and 3DEXPERIENCE.
- Led benchmarking and prototype/buck activities using A2MAC and developed vehicle specification drawings to communicate program level package targets.

FORD MOTOR COMPANY

DESIGN RELEASE ENGINEER - TVM / COST OPTIMIZATION | 04/2020 - 02/2021 | Dearborn, MI

- Owned design and release cost reduction initiatives for front end and underbody BIW systems across multiple Ford vehicle programs.
- Delivered approximately \$12M in multiple program lifecycle savings through structural redesign, material optimization, part consolidation and manufacturing method improvements.
- Drove technical and business trade studies for initiatives including tailor welded wheelhouse reinforcement changes, trailer hitch redesign and multi part consolidation while maintaining functional and manufacturing requirements.

ROUSH INDUSTRIES

PRODUCT DESIGN & RELEASE ENGINEER | 11/2017 - 04/2020 | Allen Park, MI

- Owned design and release activities for E-powertrain mounting structures and chassis/suspension components from design development through prototype and production execution.
- Supported product reviews, digital vehicle integration, prototype development and program management activities while coordinating design changes and customer deliverables.
- Documented engineering changes communicated development status through internal/customer reviews and coordinated with fabrication teams after 2D drawing release for special project vehicle fleets.

PATENTS

- Improved Noise, Vibration, and Harshness (NVH) Performance in Vehicles - PCT/Application #18/790,943; NTCNA-2024-032-US.
- Dual-function Jack Bracket in Vehicle Applications - PCT/Application #18/818,067; NTCNA-2024-047-US.
- Battery Case Retention Brackets - PCT/Application #18/901,888; NTCNA-2024-051-US.

EDUCATION

Southern Illinois University Edwardsville | Master of Science, Mechanical Engineering | 2016

Coursework: Advanced Thermodynamics, Advanced Heat Transfer, Computational Fluid Dynamics, Gas Dynamics, Gas Turbines
